

# Standardized Flexibility

## The Overall ROTZLER Recovery Vehicle Concept

ROTZLER understands recovery vehicles (RVs) as an assembly of various subsystems which are connected by means of clear interfaces. The overall hydraulic and electronic system shall be capable of integrating such individual subsystems and ensure the interoperability of the systems.

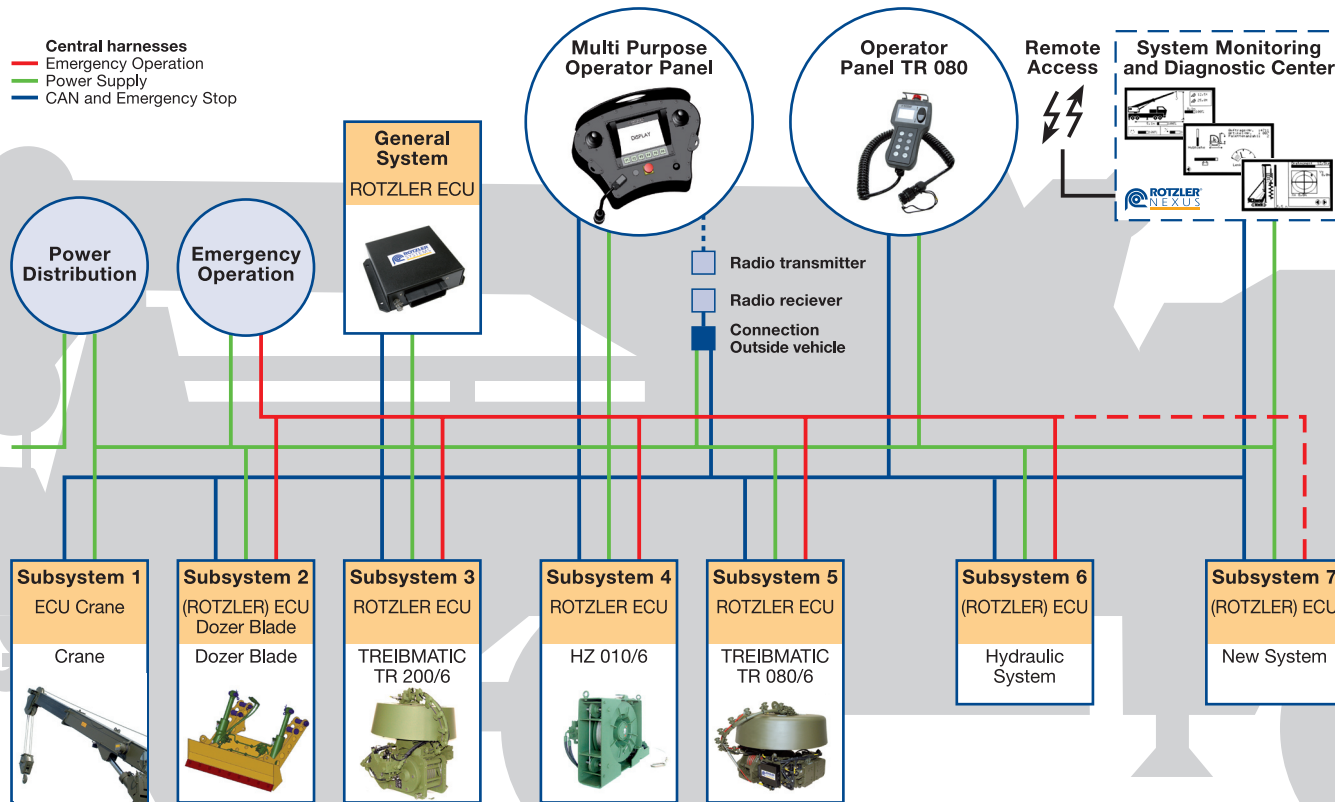

For the highest level of combat-readiness, safety and flexibility, ROTZLER provides RV concepts including standardized components to design vehicles meeting different customers' requirements.

**ROTZLER Performance+**  
Competence and experience  
in system concepts and integration

### System Overview (Example):

- Central harnesses
- Emergency Operation
- Power Supply
- CAN and Emergency Stop

**ROTZLER Safety+**  
Integration of various subsystems  
in consideration of the overall vehicle safety

**ROTZLER Operation+**  
Helpful operator support  
by multifunctional remote control

**ROTZLER Service+**  
NEXUS ensures advanced system  
diagnostics and trouble shooting
